

Fast and effective Suncoast Milk expansion

CLIENT

Suncoast Milk is a major distributor of a range of milk and dairy products throughout South East Queensland.

OBJECTIVES

Wiley was contracted to design and construct a fresh milk distribution centre, incorporating cool rooms, loading docks and dispatch areas, and offices.

The new facility was an extension of the existing dairy facility.

CHALLENGES

- Extend the loading dock in two halves to allow operations to continue at the existing facility
- Execute the works in a short timeframe.

SOLUTIONS

Design

- All design disciplines to meet cold chain and food safety standards
- An aboveground footing system to minimise demolition of existing concrete pavements.

Construction

- A full contracting role, including contracting of all subcontractors to execute the works
- Construction scheduling and programming
- Construction of a precast flooring system to allow staged construction works and to minimise disruption to existing operations during construction.

RESULTS

Wiley delivered a valuable extension to Suncoast Milk's operation that improves its overall efficiency and distribution activities.
